The graph displays the percentage of replicates with a coefficient of variation (%rCV) over a period from June to September. The y-axis is labeled '%rCV' and ranges from 1 to 5. The x-axis shows months: Jun, Jul, Aug, and Sep. The data is represented by a blue line with black circular markers at each data point. The values are generally high (above 2.0) from June through mid-July, then fluctuate between 1.0 and 2.5 until late August, where a sharp peak occurs. Following this, the values drop and remain mostly below 1.5 through September.

The graph displays the percentage of reads with coverage variation (%rCV) over a period from June to September. The y-axis is labeled '%rCV' and ranges from 1 to 6. The x-axis shows months: Jun, Jul, Aug, and Sep. The data is represented by a blue line with black circular markers at each data point. The plot shows significant fluctuations, with a major peak in late June reaching nearly 6% and another notable peak in mid-August around 4.3%. For much of the period, the %rCV remains between 1% and 3%.

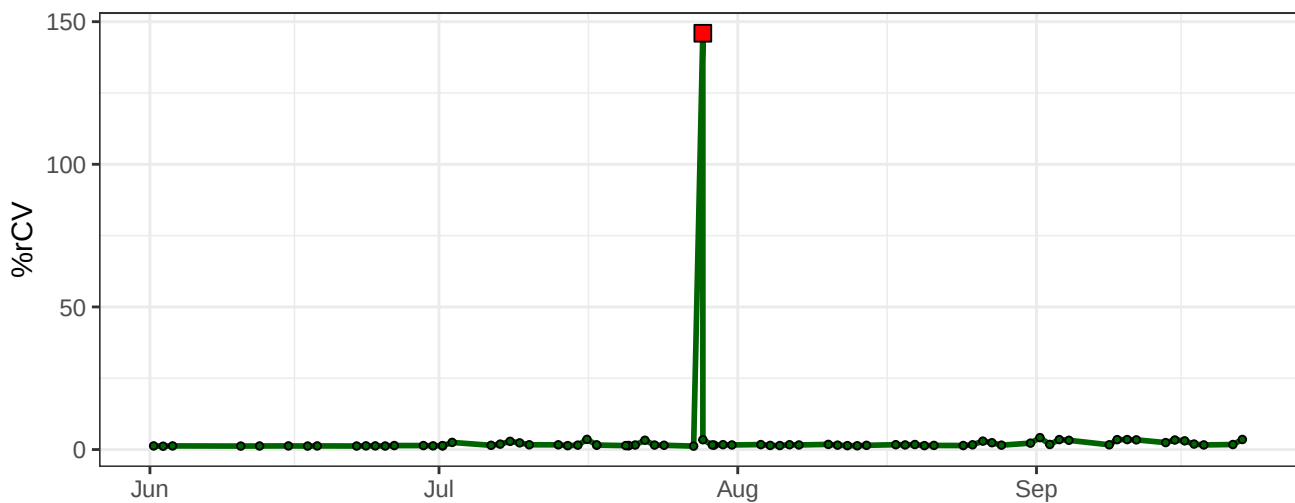

The graph displays the percentage of relative coefficient of variation (%rCV) over time. The y-axis is labeled '%rCV' and ranges from 0 to 7.5. The x-axis shows months from June to September. A blue line with black dots represents the data. Red squares highlight specific points on the line.
