The graph displays the daily number of cases over time. The y-axis represents the number of cases, with major grid lines at 0, 200, 400, 600, 800, and 1000. The x-axis shows the months of June, July, August, and September. The data points are connected by a dark green line. The number of cases remains relatively low and stable from June through mid-August, with values mostly between 50 and 100. Starting in late August, there is a significant increase, peaking at approximately 950 cases around August 25th. Following this peak, the number of cases drops sharply but remains elevated compared to the previous period, fluctuating between 100 and 200 cases through September.

The graph displays the daily number of cases over time. The y-axis is labeled with values 0, 200, 400, 600, 800, and 1000. The x-axis is labeled with the months Jun, Jul, Aug, and Sep. The data shows a period of low activity in June, followed by a sharp increase in late July, peaking at approximately 950 cases. This is followed by a rapid decline and a smaller peak in early August, after which the numbers remain relatively low through September.

The graph displays the daily count of COVID-19 cases in the United States from June 1 to September 1, 2020. The y-axis represents the number of cases, ranging from 0 to 120,000 in increments of 20,000. The x-axis shows the months of June, July, August, and September. The data is characterized by significant fluctuations, with notable peaks in early June, mid-July, mid-August, and late August. A major peak occurs in late August, reaching nearly 100,000 cases, followed by a sharp decline and another peak in early September.

The line graph illustrates the daily count of COVID-19 cases in the United States from June 1st to September 1st, 2020. The y-axis represents the number of cases, ranging from 0 to 100,000 in increments of 20,000. The x-axis shows the months of June, July, August, and September. The data shows a period of relative stability in June, followed by a massive surge in early July that peaks at nearly 100,000 cases. This is followed by a sharp decline and then a smaller peak in late July, before the case count begins to stabilize at a lower level through August and September.

The graph displays the daily count of COVID-19 cases in the United States from June 1, 2020, to September 1, 2020. The x-axis represents time in months (Jun, Jul, Aug, Sep), and the y-axis represents the number of cases, ranging from 0 to 1,000,000. The data shows a period of relative stability in June and early July, followed by a significant surge in late July. Cases peaked at approximately 1,000,000 in early August before declining sharply and stabilizing at a lower level through September.

Date	Number of Cases (Approximate)
Jun 1	100,000
Jun 15	150,000
Jun 30	100,000
Jul 15	150,000
Jul 25	200,000
Aug 1	1,000,000
Aug 15	200,000
Aug 30	100,000
Sep 1	100,000

The graph illustrates the daily reported COVID-19 cases in the Netherlands. The data shows a period of low activity in June, followed by a significant surge in late July and early August. The peak in early August is marked by a red square, indicating a critical point in the timeline. After the peak, the number of cases drops sharply and remains relatively low through September.

The graph displays the daily count of COVID-19 cases in the United States from June 1, 2020, to September 1, 2020. The x-axis represents time, with labels for June, July, August, and September. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from June through mid-July. Starting in late July, there is a significant upward trend, with cases rising to a peak of approximately 100,000 in early August. Following this peak, the number of cases declines sharply, returning to levels below 10,000 by mid-September.

The graph displays the daily number of COVID-19 cases in the Netherlands from June 1, 2020, to September 1, 2020. The x-axis represents time, with labels for June, July, August, and September. The y-axis represents the number of cases, with a scale from 0 to 1000. The data is plotted as a line with circular markers. A significant peak is observed in early August, reaching approximately 1000 cases. Following this peak, the number of cases declines sharply and remains relatively low through September.

Date	Number of Cases

Jun 15	~100
Jun 25	~100
Jul 1	~100
Jul 15	~150
Jul 25	~150
Aug 1	~100
Aug 15	~100
Aug 25	~100
Sep 1	~100

The graph illustrates the daily reported COVID-19 cases in the Netherlands. The data shows a period of low activity in June, followed by a significant surge in late July and early August. The peak in early August is marked with a red square. After the peak, the number of cases drops sharply and remains relatively low through September.

The graph displays the daily volume of tweets for the #BlackLivesMatter hashtag. The x-axis represents time from June to September 2020, and the y-axis represents the number of tweets per day. The data shows a period of low activity in June, followed by a sharp increase in late July, peaking at approximately 100 tweets per day. This is followed by a sharp decline and a period of low activity in August and September.
