The graph displays the daily number of cases over time. The y-axis represents the number of cases, ranging from 0 to 1000. The x-axis shows the months from June to September. The data is plotted as a pink line with open circles. Several points are highlighted with red squares, indicating specific dates of interest.

The graph displays the daily count of COVID-19 cases in the United States from June 1, 2020, to September 1, 2020. The x-axis represents time, with labels for June, July, August, and September. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of relative stability in June, followed by a significant surge in late July that peaks at approximately 100,000 cases in early August. After the peak, the number of cases declines, with some minor fluctuations, and remains below 20,000 by the end of the period shown.

The graph displays the daily count of COVID-19 cases in the United States from June 1, 2020, to September 1, 2020. The y-axis represents the number of cases, ranging from 0 to 120,000 in increments of 20,000. The x-axis shows the months of June, July, August, and September. The data is plotted as a blue line with circular markers at each data point. The case count starts at approximately 20,000 in early June, remains relatively stable until mid-June, then rises to about 40,000 by late June. It continues to climb, reaching a peak of over 100,000 cases in late July. Following this peak, there is a sharp decline to around 20,000 cases by early August. The case count then fluctuates between 10,000 and 20,000 for the remainder of the period shown, with a notable spike to about 25,000 cases in late August.
