The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with major ticks for August 24, September 7, and September 14, 2020. The y-axis represents the number of cases, with a major grid line at 100,000. The data points, connected by a line, show a consistent upward trend. Starting from approximately 100,000 cases in late August, the count rises to about 150,000 cases by mid-September.

The line graph displays the daily number of COVID-19 cases in the United States from August 1, 2020, to September 20, 2020. The y-axis represents the number of cases, ranging from 0 to 100,000 in increments of 20,000. The x-axis shows dates, with labels for Sep 07 and Sep 14. The data points are connected by a solid black line, and each point is marked with a black dot. The graph shows a general upward trend in cases, with a significant peak around September 10, followed by a sharp decline and a subsequent rise, and finally a very sharp drop in late September.

The graph displays the daily number of COVID-19 cases in the United States from August 2020 to September 2020. The x-axis represents time, with labels for 'Sep 07' and 'Sep 14'. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (below 10,000) from late August to early September. Starting around September 7th, there is a steady increase in cases, reaching a peak of approximately 80,000 cases around September 16th. Following the peak, the number of cases declines sharply, returning to near-zero levels by the end of the period shown.
