The graph displays the daily count of COVID-19 cases in the United States from June 1, 2020, to September 1, 2020. The y-axis represents the number of cases, ranging from 0 to 100,000. The x-axis shows the months of June, July, August, and September. The data points are connected by a blue line, showing a significant spike in cases starting in late July, peaking in early August, and then fluctuating with a general upward trend through September.

The graph displays the daily count of COVID-19 cases in the United States from June 1, 2020, to September 1, 2020. The y-axis represents the number of cases, ranging from 0 to 100,000. The x-axis shows the months of June, July, August, and September. The data points are connected by a blue line, and each point is marked with a blue dot. The graph shows a sharp decline in cases starting in late June, reaching a low point in early July, followed by a period of relative stability with minor fluctuations, and then a significant spike in cases in late August and early September.

Date	Number of Cases (Approximate)
Jun 1	85,000
Jun 15	95,000
Jun 20	90,000
Jun 25	85,000

Sep 15	20,000
Sep 20	15,000
Sep 25	10,000
Sep 30	5,000

The graph displays the daily count of COVID-19 cases in the United States from June 1 to September 1, 2020. The y-axis represents the number of cases, ranging from 0 to 100,000 in increments of 20,000. The x-axis shows the months of June, July, August, and September. The data points are connected by a solid blue line. A prominent peak occurs in early July, reaching nearly 100,000 cases. This is followed by a sharp drop to around 10,000 cases by mid-July. The case count then fluctuates between 10,000 and 30,000 for the remainder of the period shown.

Date	Number of Cases (Approximate)

The graph displays the daily number of COVID-19 cases in the Netherlands from June 1, 2020, to September 1, 2020. The y-axis is labeled 'Number of cases' and ranges from 0 to 10,000 in increments of 2,000. The x-axis is labeled with the months 'Jun', 'Jul', 'Aug', and 'Sep'. The data is represented by a blue line with circular markers at each data point. A prominent peak occurs in late July, reaching approximately 9,500 cases. Following this peak, the number of cases drops significantly and remains relatively low until late August, where it rises again to about 4,000 cases before declining once more.

The graph displays daily case counts over time. The y-axis represents the number of cases, with major grid lines at 0, 200, 400, 600, 800, and 1000. The x-axis shows the months of June, July, August, and September. A red square highlights the peak in late July, which reaches nearly 1000 cases. Other notable peaks occur in mid-June (approx. 400 cases), late June (approx. 600 cases), and mid-August (approx. 400 cases). The data shows significant daily fluctuations, with many days having zero or very low case counts.

The graph displays the daily count of COVID-19 cases in the United States from June 1, 2020, to September 1, 2020. The y-axis represents the number of cases, ranging from 0 to 250,000 in increments of 50,000. The x-axis shows the months of June, July, August, and September. The data is plotted as a blue line with circular markers at each data point. Two specific points are highlighted with red squares: one on July 1st at approximately 150,000 cases, and a much higher peak on July 28th at approximately 220,000 cases. The graph shows a general upward trend in cases throughout the period, with several smaller peaks and troughs.

Date	Number of Cases (Approximate)
June 1	100,000
June 15	50,000
June 25	150,000
July 1	150,000
July 15	100,000

The graph displays the percentage of reads with coverage variation (%rCV) over time. The y-axis is labeled '%rCV' and ranges from 1 to 5. The x-axis shows months from June to September. The data is represented by a blue line with black circular markers at each data point. The graph shows significant fluctuations, with major peaks occurring in late June (reaching approximately 5.1) and late August (reaching approximately 4.4). Other notable peaks occur in mid-June (approx. 3.4), mid-July (approx. 4.5), and mid-August (approx. 3.8). The values generally trend downwards after the initial peaks, with a period of relative stability around 1.0 from mid-August to mid-September, followed by a small spike in late September.

The graph displays the percentage of relative coefficient of variation (%rCV) over a period from June to September. The y-axis is labeled '%rCV' and ranges from 0 to 7.5. The x-axis shows the months: Jun, Jul, Aug, and Sep. The data is represented by a blue line with black dots. Three specific data points are highlighted with red squares: one in early July at approximately 7.8, one in mid-July at approximately 7.5, and one in late July at approximately 6.0.
