The graph displays the daily number of COVID-19 cases in the United States from March to August 2020. The y-axis represents the number of cases, with major grid lines at 0, 200,000, 400,000, 600,000, 800,000, and 1,000,000. The x-axis shows the months from March to August. The data shows a significant increase in cases starting in March, peaking in April at approximately 800,000 cases, followed by a period of fluctuation and a general downward trend through August, ending at around 200,000 cases.

Apr

Jul

The graph displays the daily number of COVID-19 cases in the United States from March 1 to September 1, 2020. The y-axis represents the number of cases, ranging from 0 to 100,000. The x-axis shows the months of the year. The data shows a significant increase in cases starting in March, peaking in April at approximately 100,000 cases, followed by a steady decline through the summer months, with a slight uptick in late August/early September.

Apr

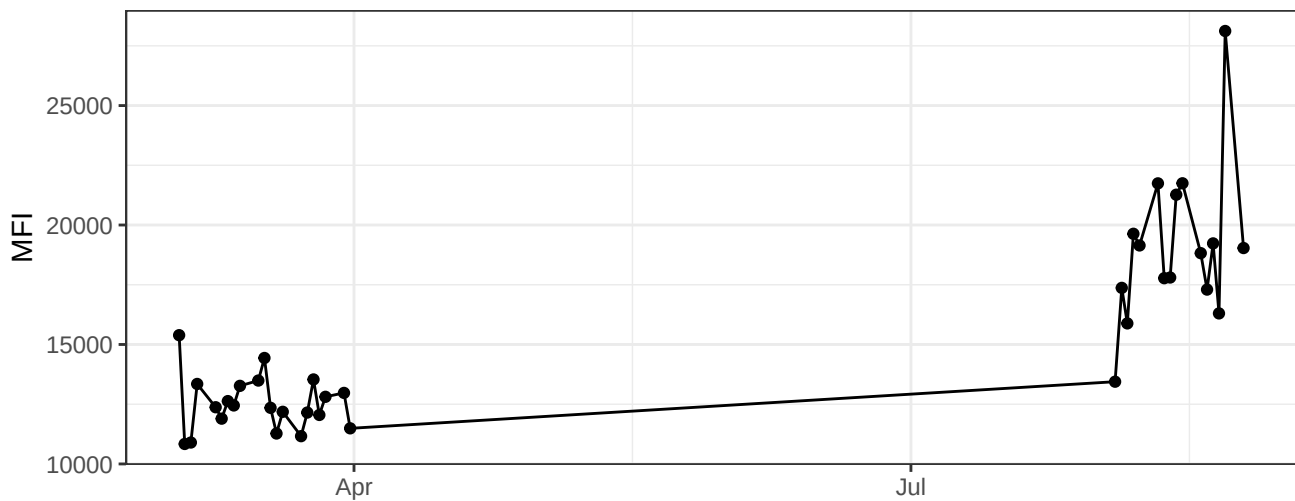

Jul

The graph displays the daily number of COVID-19 cases in the United States from March 1, 2020, to September 1, 2020. The x-axis represents time, with labels for April and July. The y-axis represents the number of cases, ranging from 0 to 1,000,000. The data shows a period of low case counts from March through late August, followed by a rapid and significant increase in cases, peaking at over 1,000,000 cases in early September, and then a sharp decline.

The graph displays the cumulative number of COVID-19 cases in the United States from March to September 2020. The x-axis is labeled with 'Apr' and 'Jul', indicating the progression of time. The y-axis has a major grid line at 100,000. The data points, shown as black dots, indicate a consistent upward trend in cases throughout the period, starting around 100,000 in March and reaching over 200,000 by September, with a minor fluctuation in late July.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is scaled from 0 to 100,000. The x-axis spans from March 2020 to May 2022, with major ticks for April and July. The data shows a massive spike in early 2020, reaching nearly 100,000 cases. After a period of relative stability with low case counts, a second, though smaller, wave begins in late 2021, peaking at approximately 25,000 cases in early 2022 before declining.

The graph displays the daily number of cases over time. The y-axis is labeled with values 0, 200, 400, 600, 800, and 1000. The x-axis has labels for 'Apr' and 'Jul'. The data shows a period of high volatility in March, with peaks reaching nearly 1000 cases. This is followed by a period of low activity in April, and a sharp increase in May, with a peak reaching over 1000 cases.
