The line graph displays the daily number of COVID-19 cases in the United States from August 1, 2020, to September 15, 2020. The x-axis represents time, with labels for 'Sep 07' and 'Sep 14'. The y-axis represents the number of cases, with a grid extending up to 100,000. The data shows a period of low case counts (around 10,000) in early August, followed by a steady increase starting around August 10. The cases plateaued at approximately 40,000 from August 15 to August 20. After a slight dip on August 21, the cases rose sharply to a peak of nearly 100,000 on August 23. This was followed by a rapid decline, with cases falling back to around 10,000 by August 25 and remaining low through the end of the period shown.

The line graph illustrates the number of people in the hospital over a period of time. The x-axis represents dates, with labels for Sep 07 and Sep 14. The y-axis represents the number of people, with a grid of 10 units. The data points are as follows:

Date	Number of People
Sep 01	4
Sep 02	10
Sep 03	10
Sep 04	4
Sep 05	4
Sep 06	4
Sep 07	4

The graph displays the daily number of COVID-19 cases in the Netherlands. The x-axis represents time, with labels for 'Sep 07' and 'Sep 14'. The y-axis represents the number of cases, with a grid extending up to 1,500. The data points show a baseline of approximately 100 cases per day from late August to early September. Starting around September 7th, the number of cases begins to rise sharply, reaching a plateau of approximately 1,500 cases by mid-September. This high level is maintained for several days before a significant decline is observed towards the end of the period shown.
