The graph displays the daily number of COVID-19 cases in the United States from May to September 2020. The y-axis represents the number of cases, ranging from 0 to 100,000. The x-axis shows the months from May to September. The data is characterized by significant daily fluctuations, with several peaks reaching between 40,000 and 60,000 cases. A notable sharp decline occurs in late September, where the number of cases drops to near zero.

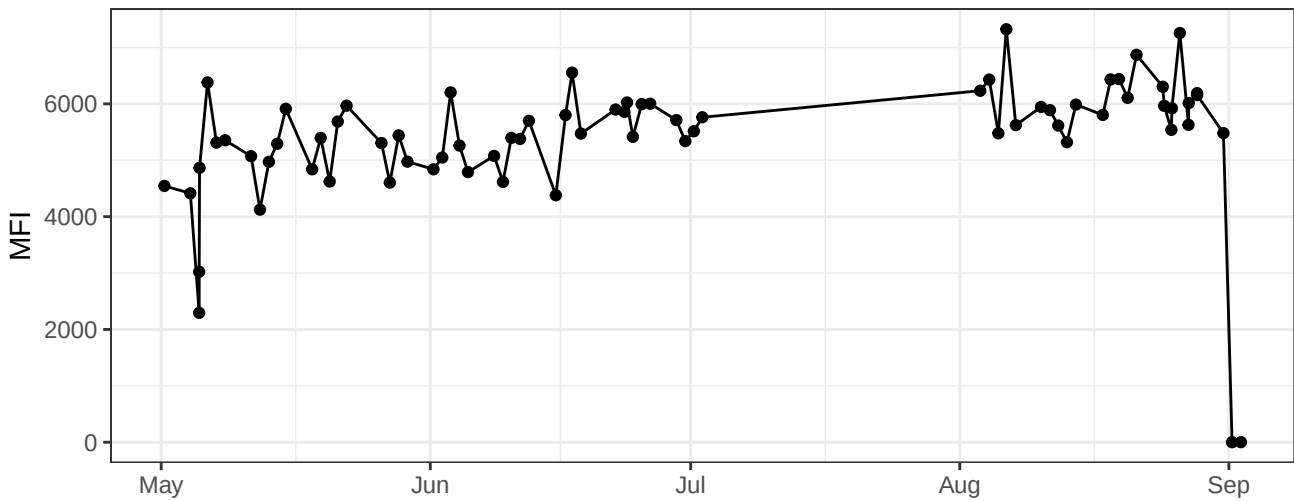

The graph displays the daily number of COVID-19 cases in the United States from May 1, 2020, to September 1, 2020. The y-axis represents the number of cases, ranging from 0 to 100,000. The x-axis shows the months of May, June, July, August, and September. The data is characterized by significant daily fluctuations, with several peaks reaching between 40,000 and 60,000 cases. A notable sharp decline occurs in late September, where the number of cases drops to near zero.

The graph displays the daily count of COVID-19 cases in the United States from May 1, 2020, to September 30, 2020. The y-axis is labeled 'Number of cases' and ranges from 0 to 1,000,000 in increments of 200,000. The x-axis is labeled with the months 'May', 'Jun', 'Jul', 'Aug', and 'Sep'. The data is represented by a black line with circular markers at each data point. The graph shows a highly volatile trend with frequent peaks and troughs. The number of cases starts around 600,000 in early May, peaks at approximately 1,000,000 in late May/early June, and then fluctuates between 400,000 and 600,000 through July and August. A sharp decline is observed in late September, with cases dropping to near zero by the end of the month.

The graph displays the daily count of COVID-19 cases in the United States from May to September 2020. The x-axis is labeled with the months: May, Jun, Jul, Aug, and Sep. The y-axis represents the number of cases, with major grid lines at intervals of 20,000, ranging from 0 to 100,000. The data points, connected by a line, show a period of low case counts (mostly below 10,000) from May through late August. Starting in late August, there is a rapid and significant increase in cases, reaching a peak of nearly 100,000 in early September, before showing a slight downward trend at the very end of the month.

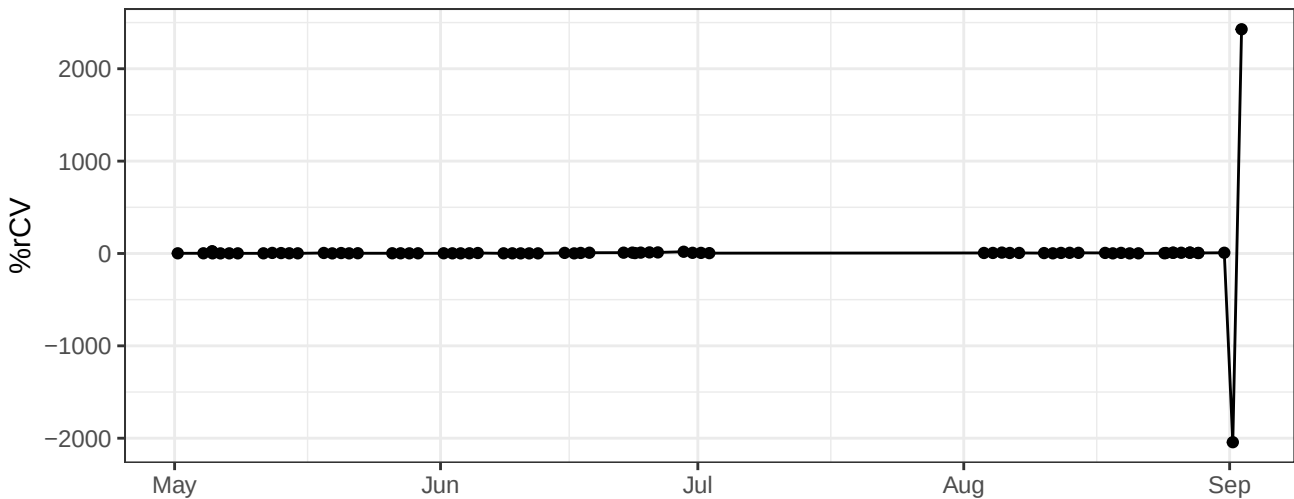

The graph displays the daily death toll over a five-month period. The x-axis represents time, with labels for May, Jun, Jul, Aug, and Sep. The y-axis represents the number of deaths, with a grid line at 10. The data points show zero deaths from May through late August, followed by a sharp spike to approximately 10 deaths in early September.

The graph displays the daily count of COVID-19 cases in the United States from May to September 2020. The y-axis is labeled 'Number of cases' and ranges from 0 to 100,000 in increments of 20,000. The x-axis is labeled with the months 'May', 'Jun', 'Jul', 'Aug', and 'Sep'. The data points are connected by a solid black line. The number of cases remains relatively low and stable, mostly below 10,000, from May through late August. Starting in late August, there is a rapid and significant increase in cases, reaching a peak of nearly 100,000 in early September. Following the peak, the number of cases begins to decline sharply.

The graph displays the percentage of reads with a coverage value (rCV) over a five-month period. The x-axis represents time, with labels for May, Jun, Jul, Aug, and Sep. The y-axis represents %rCV, ranging from 0 to 6000. The data points are connected by a black line. The rCV remains consistently low (near 0) from May through August. In late September, there is a dramatic increase, with the rCV peaking at approximately 5800 before dropping sharply to around 500.
